A GENERALIZATION OF THE DU INTEGRAL INEQUALITY

CHRISTOPHE CHESNEAU

Department of Mathematics LMNO University of Caen-Normandie 14032 Caen France e-mail: christophe.chesneau@gmail.com

Abstract

This paper is devoted to a generalization of an integral-type inequality established by Wei-Shih Du in 2023. The generalization is motivated by the inclusion of two adaptable mathematical quantities: a parameter and a probability density function. An application to the Laplace transform is discussed.

1. Introduction

Inequality theory is the basis for many theoretical and practical advances in various scientific disciplines. It aims to provide simple tools for evaluating the behaviour of complex mathematical quantities through the use of bounds. The most classical inequalities can be found in [1, 3, 9, 10]. By generalizing these classical inequalities, we can facilitate the

and

$$
\inf_{x \in [a, b]} |f(x)g(x)| \geq c,
$$

where c denotes a strictly positive constant. Then we have

$$
\int_a^b |f(x)|dx \ge (b-a)\sqrt{c}.
$$

The proof is derived from the arithmetic mean-geometric mean inequality and a judicious use of the assumptions made.

A GENERALIZATION OF THE DU INTEGRAL INEQUALITY 47

In this paper, we propose a generalization of Theorem 1.2. It is obtained by using a generalized version of the Hölder inequality, giving alternative techniques to those used in the proof in [4, Theorem 2.5]. The generalization is characterized by the addition of an adjustable parameter and a special function. This special function belongs to the class of a probability density functions, i.e., functions $h(x)$ which are almost surely A GENERALIZATION OF THE DU INTEGRAL INEQUALITY 47
In this paper, we propose a generalization of Theorem 1.2. It is
obtained by using a generalized version of the Hölder inequality, giving
alternative techniques to those u $+\infty$ $h(x)dx = 1$, see [8]. An advantage of this generalization is the relaxation of the integration domain (a, b) , depending on the support of the chosen probability density function. A new inequality involving a famous transform is then established using this general result. ntinuous on \mathbb{R} , positive, and such that $\int_{-\infty}^{+\infty} h(x)dx = 1$, see [8]. presents our generalized inequality,

Section 2 presents our generalized inequality, together with applications and discussion. A conclusion is given in Section 3.

2. Generalization

The theorem below presents the proposed generalization.

Theorem 2.1. Let $p > 1$, $f : \mathbb{R} \to \mathbb{R}$ be a function, and $h : \mathbb{R} \to [0, +\infty)$ be a probability density function such that $f(x)h(x)$ is integrable. Suppose that there exists a function $g : \mathbb{R} \to \mathbb{R}$ such that $|g(x)|^{1/(p-1)}h(x)$ is integrable, eneralization

sthe proposed generalization.

1, $f : \mathbb{R} \to \mathbb{R}$ be a function, and

tity density function such that $f(x)h(x)$ is

exists a function $g : \mathbb{R} \to \mathbb{R}$ such that
 $h(x)dx \le \int_{-\infty}^{+\infty} |f(x)|h(x)dx$,
 $|f(x)g(x)| \$

$$
\int_{-\infty}^{+\infty} |g(x)|^{1/(p-1)} h(x) dx \leq \int_{-\infty}^{+\infty} |f(x)| h(x) dx,
$$

and

$$
\inf_{x\in\mathbb{R}}|f(x)g(x)|\geq c,
$$

where c denotes a strictly positive constant. Then we have

$$
\int_{-\infty}^{+\infty} |f(x)| h(x) dx \geq c^{1/p}.
$$

CHRISTOPHE CHESNEAU
 Proof. Since $\int_{-\infty}^{+\infty} h(x)dx = 1$, $h(x) \ge 0$ for any $x \in \mathbb{R}$, and, by

umption, $\inf_{x \in \mathbb{R}} |f(x)g(x)| \ge c$, we have
 $c^{1/p} = c^{1/p} \int_{-\infty}^{+\infty} h(x)dx \le \int_{-\infty}^{+\infty} |f(x)g(x)|^{1/p} h(x)dx$. (1) $+\infty$ $h(x)dx = 1$, $h(x) \ge 0$ for any $x \in \mathbb{R}$, and, by assumption, $\inf_{x \in \mathbb{R}} |f(x)g(x)| \geq c$, we have TOPHE CHESNEAU
 $dx = 1$, $h(x) \ge 0$ for any $x \in \mathbb{R}$, and, by
 $\ge c$, we have
 $(x)dx \le \int_{-\infty}^{+\infty} |f(x)g(x)|^{1/p}h(x)dx$. (1)

real number $q > 1$ such that $1/p + 1/q = 1$,

from the generalized version of the Hölder

$$
c^{1/p} = c^{1/p} \int_{-\infty}^{+\infty} h(x) dx \le \int_{-\infty}^{+\infty} |f(x)g(x)|^{1/p} h(x) dx.
$$
 (1)

Now, let us consider the real number $q > 1$ such that $1/p + 1/q = 1$, so $q = p/(p-1)$. It follows from the generalized version of the Hölder inequality applied with the parameters p (and q) and the probability measure $v(x) = h(x)dx$ that **CHRISTOPHE CHESNEAU**
 oof. Since $\int_{-\infty}^{+\infty} h(x)dx = 1$, $h(x) \ge 0$ for any $x \in \mathbb{R}$, and, by

ption, $\inf_{x \in \mathbb{R}} |f(x)g(x)| \ge c$, we have
 $e^{\lambda/p} = e^{\lambda/p} \int_{-\infty}^{+\infty} h(x)dx \le \int_{-\infty}^{+\infty} |f(x)g(x)|^{1/p} h(x)dx$. (1)

w, let us con **Proof.** Since $\int_{-\infty}^{+\infty} h(x)dx = 1$, $h(x) \ge 0$ for any $x \in \mathbb{R}$, and, by

umption, $\inf_{x \in \mathbb{R}} |f(x)g(x) \ge c$, we have
 $c^{1/p} = c^{1/p} \int_{-\infty}^{+\infty} h(x)dx \le \int_{-\infty}^{+\infty} |f(x)g(x)|^{1/p}h(x)dx$. (1)

Now, let us consider the real numb sumption, $\inf_{x \in \mathbb{R}} |f(x)g(x)| \ge c$, we have
 $c^{1/p} = c^{1/p} \int_{-\infty}^{+\infty} h(x) dx \le \int_{-\infty}^{+\infty} |f(x)g(x)|^{1/p} h(x) dx$. (1)

Now, let us consider the real number $q > 1$ such that $1/p + 1/q = 1$,
 $q = p/(p-1)$. It follows from the generalized

$$
\int_{-\infty}^{+\infty} \left|f(x)g(x)\right|^{1/p} h(x)dx \leq \left[\int_{-\infty}^{+\infty} \left|f(x)\right| h(x)dx\right]^{1/p} \left[\int_{-\infty}^{+\infty} \left|g(x)\right|^{q/p} h(x)dx\right]^{1/q}.
$$
\n(2)

 $\int_{-\infty}^{+\infty} |g(x)|^{1/(p-1)}$ $+\infty$ $\leq \int_{-\infty}^{\infty} |f(x)| h(x) dx$, we get

$$
c^{1/p} = c^{1/p} \int_{-\infty}^{\infty} h(x) dx \le \int_{-\infty}^{\infty} |f(x)g(x)|^{1/p} h(x) dx.
$$
 (1)
, let us consider the real number $q > 1$ such that $1/p + 1/q = 1$,
 $p/(p-1)$. It follows from the generalized version of the Hölder
ty applied with the parameters p (and q) and the probability
 $v(x) = h(x)dx$ that

$$
y(g(x)|^{1/p} h(x)dx \le \left[\int_{-\infty}^{+\infty} |f(x)|h(x)dx\right]^{1/p} \left[\int_{-\infty}^{+\infty} |g(x)|^{q/p} h(x)dx\right]^{1/q}.
$$
 (2)
g $q/p = 1/(p-1)$ and the assumption $\int_{-\infty}^{+\infty} |g(x)|^{1/(p-1)}h(x)dx$
 $f(x)|h(x)dx$, we get

$$
\left[\int_{-\infty}^{+\infty} |f(x)|h(x)dx\right]^{1/p} \left[\int_{-\infty}^{+\infty} |g(x)|^{q/p} h(x)dx\right]^{1/q}
$$

$$
\le \left[\int_{-\infty}^{+\infty} |f(x)|h(x)dx\right]^{1/p} \left[\int_{-\infty}^{+\infty} |f(x)|h(x)dx\right]^{1/q}
$$

$$
= \left[\int_{-\infty}^{+\infty} |f(x)|h(x)dx\right]^{1/p} \left[\int_{-\infty}^{+\infty} |f(x)|h(x)dx\right]^{1/q}
$$

$$
= \left[\int_{-\infty}^{+\infty} |f(x)|h(x)dx\right]^{1/p+1/q} = \int_{-\infty}^{+\infty} |f(x)|h(x)dx.
$$
 (3)
ining Equations (1), (2) and (3), we obtain

$$
\int_{-\infty}^{+\infty} |f(x)|h(x)dx \ge c^{1/p}.
$$

By combining Equations (1), (2) and (3), we obtain

$$
\int_{-\infty}^{+\infty} |f(x)| h(x) dx \geq c^{1/p}.
$$

The desired inequality is proved.

The proof of Theorem 1.2 is thus based on an integral-type inequality, i.e., the generalized version of the Hölder inequality, as opposed to that of [4, Theorem 2.5], which is based on the arithmetic mean-geometric mean inequality.

A GENERALIZATION OF THE DU INTEGRAL INEQUALITY 49
The proof of Theorem 1.2 is thus based on an integral-type inequality,
the generalized version of the Hölder inequality, as opposed to that of
Theorem 2.5], which is based density function of the uniform distribution over $[a, b]$ for $h(x)$, i.e., $h(x) = 1/(b - a)$ for $x \in [a, b]$ and $h(x) = 0$ for any $x \notin [a, b]$, Theorem 2.1 becomes Theorem 1.2. In particular, all the examples developed in [6] are covered.

General but crude examples of functions $f(x)$ satisfying the assumptions of Theorem 2.1 include functions of the form A GENERALIZATION OF THE DU INTEGRAL INEQUALITY 49
The proof of Theorem 1.2 is thus based on an integral-type inequality,
 α , the generalized version of the Hölder inequality, as opposed to that of
 α , Theorem 2.5], $= c/g(x) + g(x)^{1/(p-1)}$ or $f(x) = \max[c/g(x), g(x)^{1/(p-1)}],$ where A GENERALIZATION OF THE DU INTEGRAL INEQUALITY 49
The proof of Theorem 1.2 is thus based on an integral-type inequality,
.e., the generalized version of the Hölder inequality, as opposed to that of
4, Theorem 2.5], which $g(x)$ denotes a positive function satisfying the required convergence assumptions.

Theorem 2.1 is thus a valuable generalization of Theorem 1.2, thanks to the presence of p and the probability density function $h(x)$, both of which are adaptable to different applications. In particular, thanks to this probability density function, different domains of integration can be considered in the integral terms, depending on the support of this function. examples or tunctions $f(x)$ satisfying the

Theorem 2.1 is thus a valuable generalization of Theorem 1.2, thanks that the ther

Among the possible applications of this result, let us present one involving the Laplace transform. We recall that the Laplace transform of a function $k : [0, +\infty) \to \mathbb{R}$ at $\lambda \in \mathbb{R}$ is defined by

$$
\mathcal{L}(k)(\lambda) = \int_0^{+\infty} k(x)e^{-\lambda x}dx,
$$

provided that it converges in the integral sense; $k(x)e^{-\lambda x}$ must be integrable over $(0, +\infty)$. See [5]. The Laplace transform is a powerful tool in differential equations, signal processing, and control theory, among

is integrable.

$$
\mathcal{L}\big[\big|g\big|^{1/(p-1)}\big](\lambda) \leq \mathcal{L}\big[\big|f\big|\big](\lambda),
$$

and

$$
\inf_{x\in(0,+\infty)}|f(x)g(x)|\geq c,
$$

where c denotes a strictly positive constant. Then we have

$$
\mathcal{L}[|f|](\lambda) \geq \frac{c^{1/p}}{\lambda}.
$$

Proof. This is a direct application of Theorem 2.1 by considering the probability density function of the exponential distribution with **Proposition 2.2.** Let $p > 1$, $\lambda > 0$ and $f : [0, +\infty) \rightarrow \mathbb{R}$ be a
function such that $|(x)e^{-\lambda x}$ is integrable. Suppose that there exists a
function $g : [0, +\infty) \rightarrow \mathbb{R}$ such that $|g(x)|^{1/(p-1)}e^{-\lambda x}$ is integrable,
 \mathcal parameter λ for $h(x)$, i.e., $h(x) = \lambda e^{-\lambda x}$ for any $x \ge 0$, and $h(x) = 0$ for any $x < 0$ (see [8]). Based on this setting, it is sufficient to note that ∞ → R such that $|g(x)|^{1/(p-1)}e^{-\lambda x}$ is integrable,
 $\mathcal{L}[|g|^{1/(p-1)}](\lambda) \leq \mathcal{L}[|f|](\lambda)$,
 $\frac{\inf}{x \in (0, +\infty)} |f(x)g(x)| \geq c$,

strictly positive constant. Then we have
 $\mathcal{L}[|f|](\lambda) \geq \frac{c^{1/p}}{\lambda}$.

So a direct appli

$$
\int_{-\infty}^{+\infty} |f(x)|h(x)dx = \int_{0}^{+\infty} |f(x)|\lambda e^{-\lambda x}dx = \lambda \mathcal{L}[|f|](\lambda),
$$

and the same for the other functions involved. This yields the desired r esult. \Box

This inequality involving the Laplace transform with intermediate parameters and functions is new in literature to the best of our knowledge.

3. Conclusion

In this paper, we have generalized an integral-type inequality established by Wei-Shih Du in 2023, which itself extends an older integral-type inequality that has attracted some attention. The generalization is motivated by the inclusion of a parameter and a probability density function, which can be adapted as needed. By introducing these variables, we extend the scope and exibility of the Du original inequality, allowing it to be applied in a wider range of mathematical contexts. In particular, an application to the Laplace transform is discussed. Given the importance of this transform in many scientific disciplines, we hope that our new results will have future applications in nonlinear analysis, mathematical physics and related fields.
